R84783-800 are M9-2 peptides modified to improve immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and its immunogenic peptides may be used in the detection and isolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

R84783-800 are M9-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

SE MAT 83-800 are M3-2 peptides modified to improve immunogenicity. M9-2 is an immunogenic peptide based on the melanoma antigen (MART-1) (see R84212). The peptides are used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against MART-1 and its immunogenic peptides may be used in the detection and isolation of MARR-1 from a sample, the detection of which is sequence 9 AA;

-!- FUNCTION: THE C CHAIN IS A PROTEOLIPID, AND ONE OF THE MEMBRANOUS SUBBUNITS OF THE THE NONENZYMATIC COMPONENT OF THE SUL-ATPASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMPLEX.
--- SUBUNIT: SUL-ATPASE IS COMPOSED OF SIX (OR FIVE ?) SUBUNITS:
ALPHA, BETA, DELTA, GAMMA, C (PROTEOLIFID), AND POSSIBLY EPSILON.
--- SIMILARITY: TO THE PROTEOLIPID SUBUNIT OF FORI-ATPASES.

MENGIN-LECREULX D., VAN HEIJENOORT J.;

J. BACTERIOL. 175:6157 (1993).

-1 - FUNCTION: BIFUNCTIONAL ENZYME RESPONSIBLE FOR THE ACETYLATION OF GLC.N-1-P TO GIVE GLC.NAC-1-P AND THE SYNTHESIS OF UDP-GLCNAC.

-1 - CATALYTIC ACTIVITY: UTP + N-ACETYL-ALPHA-D-GLUCOSAMINE

-1 - PHOSPHATE = PYROPHOSPHATE + UDP-N-ACETYL-D-GLUCOSAMINE

-1 - PATHWAY: PEPTIDOGLYCAN AND LIPOPOLYSACCHARIDE BIOSYNTHESIS.

-1 - CATUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO A FRAMESHIFT THAT CREATES TWO ORFS.

-1 - SIMILARIYY: BELONGS TO THE CYSE/LACA/LDXA/NODL FAMILY OF ACETYLTRANSFERASES. COMPOSED OF MULTIPLE REPEATS OF [LIV]-G-X(4).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

AM EDLINE; 98057486.

AM CHEN H.-C., WINTZ H., WEIL J.-H., PILLAY D.T.N.;

NUCLEIC ACIDS RES. 16:10372-10372(1988).

-! FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON

GRADIENT ACROSS THE MEMBRANE.

-!- SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC

CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE

SUBUNITS: ALPHA(3), BETA(3), GAMA(1), DELTA(1), EPSILON(1). CF(0)

HAS THREE MAIN SUBUNITS: A, B AND C.

-!- SUBCLIULAR LOCATION: CHLOROPLAST THYLAKOID MEMBRANE.

-!- SIMILARITY: BELONGS TO THE ATPASE EPSILON CHAIN FAMILY.

PRES. $12889; G11334; -.

R Modern melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

T T Westors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

T I May age 131; 184pp; English.

C The immunogenic peptide is derived from cDNA25 (R84854), a melanoma antigen derivatives (see R84200-R84821) are used in medicaments (vaccines) for the treatment or prevention (by immunization) of melanoma. Antibodies against melanoma-specific antigens and its immunogenic peptides may be used in the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

detection of tumours

Claim 1: Page 22-24: 40pp; English.

Imminogenic peptides derived from the melanoma associated antigen
Imminogenic peptides derived from the melanoma essociated antigen
may be used in the production of vaccines. Nucleotide sequences
encoding the immunogenic peptides may be used as primers and probes
in the detection of melanoma cells. Tumour infiltrating lymphocytes
capable of binding to the melanoma associated antigen can be
cultured ex vivo and returned to melanoma particles, and when
radiolabelled, they may be used to identify tumour deposits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

A melanoma-specific immunogen homologous with pMel-17 comprises one or more TL (cytotoxic T lymphocyte) epitopes from the group R82098-882194 capable of eliciting a CTL response. The epitopes R82098-R82108 are of particular interest. The immunogen can be used for partial protection in mammals against melanoma peptides which are homologous with pMel-17 are highly potent stimulators of HLA-A2+CTLS in several cell lines and can be used in immunotherapy or incorporated into immunogenic conjugates as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 75-78; 87pp; English.

Human neurofibromatosis type 1 (NR1) GAP related domain (GRD) mutant clones NR201 (given in R5921) and NR204 (R5922) show strong suppression activity for RASZVall9, and inhibit v-Ras-induced transformation in mammalian cells. The mutation sites of these proteins were located in one of the most conserved GRD family proteins, yeast Ira2 (R59926) and Ira1 (R59923), human GAP (R59924) and Schizosaccharomyces pombe Gapl (R59925).
                                                                                                                                                                                                                                                                                                                                                                                  WPI; 95-302688/39.
Melanoma-specific immunogen comprises epitope(s) homologous with pMel.17 - are highly potent stimulators of HLA-A2+CTL's useful in adoptive immuno-therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          activating protein to the cell, used esp. in treatment of cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Blocking Ras-induced effects on a cell - by introducing a GTPase
                                                                                             25-MAR-1996 (first entry)
Melanoma-specific mutant immunogen epitope 9mer peptide.
Melanoma: immunogen; epitope; homologue; vaccine; immunotherapy;
Cycologic T cell; lymphocyte; HLA-A2.
                                                                                                                                                                                                                                                                                                                                      (UYVI-) UNIV VIRGINIA PATENT FOUND.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and minumise animal against melanoma.

Timunise animal against melanoma.

Claim 81, Fig 5A; 184pp; English.

CDNAZ is a melanoma antigen (MART-1) which is recognized by cDNAZ is a melanoma antigen (MART-1) which is recognized by recipied antigen spl00 (see R84199) which are optionally modified of immunogenic peptides (see R84199) which are optionally modified used in medicaments, especially vaccines, for the treatment or prevention (by immunisation) of melanoma. Antibodies against cDNAZ and its immunogenic peptides may be used in the detection and its immunogenic peptides may be used in the detection and its immunogenic peptides may be used in the detection and its immunogenic peptides may be used in the detection and control of alisease state (melanoma or metastatic melanoma).
DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Claim 81, Fig 7A: 184pp: English.

Englo is a melanocyte-melanoma-specific antigen (MART-1) which is recognized by T-lymphocytes, and is a derivative of the melanoma-specific antigen CDNA75 (see R84854). gpl00 is a source of immunogenic peptides which are optionally modified to enhance their binding to a MHC molecule, and used in medicaments, especially vaccines, for the treatment or prevention (by immunisation) of melanoma. Antibodies against cDNA2 and its immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The amino acid (AA) sequence is that of a hydroxylase from Streptomyces clavuligerus which catalyses the reaction in which deacetoxycephalosporin C (DAC) is hydroxylated at the 3-methyl gp. to form deacetylcephalosporin C (DAC). The AA sequence differs from that which would result if the nucleotide sequence given in the specification was translated. It appears that a nucleotide (T) has been omitted from position 307 resulting in a shift of reading frame and a completely different protein to the sequence given in the specification (this also appears to have AAs 141-160 duplicated).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure: Page 4; 15pp; English.

The sequences given in R44430-32 are encoded by the eryA fragment of the Saccarapolyspora erythraea genome. These polypeptides are involved in the biosynthesis of the polyketide segment of erythromycin. Ordersation step 1. The precise succession of elongation steps is condensation step. The precise succession of elongation steps is dictated by the genetic order of the modules. The DNA encoding these polypeptides may be specifically altered such that novel polyketide molecules of desired structure are produced. Three types of alteration may be produced; those inactivating a single function in a module which does affect chain growth; and those single function in a module. The mutations may be introduced by gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                      ö
frame and a completely different protein to the sequence given here. The sequence shown here is identical to that given in the specification, AAS 141-160 appear to have been mistakenly duplicated as there are no corresponding codons for such a duplication in the given DNA sequence. See also R20110.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Parting Super:agonists, antagonists and super:antagonists or hormones - partic. interleukin-6, oncostatin M, leukaemia
Inhibitory factor, ciliary neurotrophic factor or interleukin-11
Example 2: Page 12: 35pp. English.

Example 2: Page 12: 35pp. English.

CT he amino acid sequence of the helix A of the human interleukin-6 (IL-6).

The gene encoding the IL-6 was mutated by PCR to change certain of the amino acids in helix A (see R6895-60). The biological activity and compared. The interaction of the IL-6 and its mutants compared to a method to detect the superagonists, antagonists or superantagonists of a hormone. This is performed by comparing the a.a.

Csuperantagonists of a hormone with its (ant)agonist; comparing the a.a.

Cc acid sequence of the hormone with its (ant)agonist; comparing the a.a.

Cc acid sequence of the hormone with its (ant)agonist; capering caperating and appla), and identifying residues forming a part of the site of interaction with the hormone receptor and gpl30 based on 3-dimensional compared of the receptor complex. The method can be used to select super(ant)agonists of hormones such as interleukin-6 (IL-6), concostatin M (OSM) leukaemia inhibitory factor (LIF) or ciliary
                                                   05-SEP-1995 (first entry)
Wild type interleukin-6 helix A.
Human; interleukin-6; helix A; biological activity; superagonist;
Bundang activity; receptor; gp80; antagonist; superantagonist; hormone;
gp130; receptor complex; oncostatin; leukaemia inhibitory factor; LIF;
cillary neurotrophic factor; CNTF; agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       interleukin-6 mutant, related DNA and expression vectors - has higher stability than natural interleukin-6 claim 1; Pages 14-15; 18pp; Japanese. 904347 encodes R77392 the human IL-6 deletion mutant IL-6a'C2 which lacks the amino acids Gly5-Leul9 and Cys73-Cys83 of the wild type protein. The CDNA can be used for the recombinant prodn. of IL-6a'C2 which has increased stability compared to wild type

C the 13 exons which pVI-3 (22) encompasses are within the breakpoint cluster region (bcr) (see N60228). To exactly determine the location of the breakpoint in K-562 (22q-), the DNA sequence of the breakpoint region of K-562 was compared with the normal genomic chromosome 22 DNA sequences (see N60229,N60230). In the DNA of patient 0319129, the chromosomal break has occurred in a rather precise manner, leading to the generation of a 22q- and 9q+ sequence exactly reflecting the sequence of the normal chromosome 22 and 9 DNA sequences (N60231,N60232,N61203). However, in the 9q+ DNA of patient 0212015, sequence are found between the breakpoints on chromosome 9 and 22 which are not present in the credion sequenced of the normal chromosomes 9 and 22 (N60233,N60234, N60234,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The amino acid sequence is that of bacterial amylase A-180 which is used to prepare maltopentose (G5) in high yields by hydrolysis of starch. It can be modified to ensure its excretion, obviating the need to concentrate and purify the enzyme, i.e. the culture supernatant can be used directly for G5 prodn. G5 yields of over 90% are possible, assays for diagnosis, as carbohydrate sources in liquid feeding compons, and for converting (by esterification) fatty acids to water-soluble form, suitable for use in stable infusion solns.

Mean 24.519; Variance 26.804; scale 0.915 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FOR T LYMPHCOYTE PROLIFERATION AND INTERLEUKIN 2 PRODUCTION, BY BINDING CD28 OR CTLA-4. MAY PLAY A CRITICAL ROLE IN THE EARLY BINDING CD28 OR CTLA-4. MAY PLAY A CRITICAL ROLE IN THE EARLY CHARA S DECIDING BETWEEN IMMUNITY AND ANERGY THAT IS MADE BY T CELLS WITHIN 24 HOURS AFTER ACTIVATION.

- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

- SIMILARITY: BELONGS TO THE IMMUNGLOBULIN SUPERFAMILY. CONTAINS ONE C2-LIKE AND ONE V-LIKE DOWAIN.

-1- FUNCTION: NEUROFILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M,

AND H WHICH ARE INVOLVED IN THE MAINTENANCE OF NEUROWAL CALIBER.

-1- FUNCTION: NEUROFILAMENTS USUALLY CONTAIN THIS MOTIF. IT IS

THOUGHT THAT PHOSPHORYLATION OF NEH RESULTS IN THE FORMATION OF

INTERFILAMENT CROSS BRIDGES THAT ARE IMPORTANT IN THE MAINTENANCE

OF THE LARGER NEUROFILAMENT POLYPEPTIDES (NF-MAND NF-H), THE

LEVELS OF PHOSPHORYLATION SEEMS TO PLAY A MAJOR ROLE IN THE FUNCTIONING

OF THE LARGER NEUROFILAMENT POLYPEPTIDES (NF-MAND NF-H), THE

LEVELS OF PHOSPHORYLATION BEING ALTERED DEVELOPMENTALLY AND

COINCIDENT WITH A CHANGE IN THE NEUROFILAMENT FUNCTION.

-1- SIMILAMENTY: TO ALL OTHER INTERMEDIATE FILAMENT PROTEINS.

1- FUNCTION. HYDROXYLATION OF DESACETOXICEPHALOSPORIN C IN
3-POSITION TO FORM DEACETYLCEPHALOSPORIN C.

1- PATHWAY: CEPHALOSPORIN BIOSYNTHESIS.

1- SIMILARITY: BELONGS TO CHE INON/ASCORBATE-DEPENDENT FAMILY OF OXIDOXEDUCTASES.

EMBL; M63809; G153207; --

-1- FUNCTION: IMPORTANT FOR THE METABOLISM OF AMINO ACIDS AND KREBS-
CYCLE RELATED ORGANIC ACIDS. IN PLANTS, IT IS INVOLVED IN NITROGEN
METABOLISM AND IN ASPECTS OF CARBON AND ENERGY METABOLISM.

-1- CAPLITIC ACTIVITY: L-ASPARTATE + 2-OXOGLUTARATE = OXALOACETATE +

BETA-KETOREDUCTASE (KR), DEHYDRATASE (DH), AND ENOYL REDUCTASE (ER) FOR PROCESSING OF THE BETA CARBON, AND THIOESTERASE (TE) FOR RELEASE AND LACTONIZATION OF THE FULL-LENGTH CHAIN.
BIOSYNTHESIS.

-!- COFACTOR: NADP.
-!- COFACTOR: NADP.
-!- COFACTOR: CONTAINS TWO COVALENTLY BOUND PHOSPHOPANTETHEINES.
-!- IN EACH ORF OF ERYA TWO MODULES ARE PRESENT EACH ENCODING FOR A FUNCTIONAL SYNTHASE SUBUNIT. THUS ERYA SHOWING 3 ORFS CODES FOR 6 SYNTHASE SUBUNITS. IT IS SUPPOSED THAT EACH SYNTHASE PARTICIPATES IN ONE OF THE SIX FAS-LIKE ELONGATION STEPS REQUIRED FOR FORMATION OF THE POLYKETIDE. MODULE 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4, 5, AND 6 PARTICIPATING IN BIOSYNTHESIS STEPS 1, 2, 3, 4,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                This provides an antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Sclaim 55: Page 131; 184pp; English.

The immunogenic peptide is derived from cDNA25 (R84854), a melanoma antigen derivative of gp100 (see R84855). The peptide and its derivatives (see R84200-R84211) are used in medicaments (vaccines) for the treatment or prevention (by immunization) of melanoma. Antibodies against melanoma-specific antigens and its immunogenic peptides may be used in the detection of which is indicative of a disease state

( melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 22-24; 40pp; English.

Immunogenic peptides derived from the melanoma associated antigen may be used in the production of vaccines. Nucleotide sequences encoding the immunogenic peptides may be used as primers and probes in the detection of melanoma cells. Tumour infiltrating lymphocytes capable of binding to the melanoma associated antigen can be cultured ax vivo and returned to melanoma particles, and when readiolabelled, they may be used to identify tumour deposits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and rimmunise animal against melanoma.

T immunise animal against melanoma.

Claim 81; Fig 5A; 184pp; English.

Claim 81; Fig 5A; 184pp; English.

CDNA2 is a melanoma antigen (MART-1) which is recognized by T-lymphocytes, and is a derivative of the melanocyte-melanoma.

T-lymphocytes, and is a derivative of the melanocyte-melanoma.

C specific antigen gp100 (see R84855). Antigen cDNA25 is a source of immunogenic peptides (see R84109) which are optionally modified (see R84200-R84211) to enhance their binding to a MHC molecule and used in medicaments, especially vaccines, for the treatment or condition (see R84200 melanoma. Antibodies against cDNA2 and its immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                      DNA encoding melanoma antigens recognised by T-lymphocytes - also vectors, host cells and antibodies, used to detect, treat and immunise animal against melanoma.

Claim 81, Fig 7A: 184pp; English.

Gpl00 is a melanocyte-melanoma-specific antigen (MART-1) which is recognized by T-lymphocytes, and is a derivative of the melanoma-specific antigen cDNA25 (see R84854). gpl00 is a source of immunogenic peptides which are optionally modified to enhance their binding to a MHC molecule, and used in medicaments, cospecially vaccines, for the treatment or prevention (by immunogenic peptides may be used in the detection and isolation immunogenic peptides may be used in the detection and isolation of the antigen from a sample, the detection of which is indicative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of large quantities of enzyme for conversion of precursor peptide(s) to amidated forms for conversion of precursor peptide(s) to amidated forms for conversion of precursor Claim 15; Page 19; 34pp. English.

This sequence represents prolylendopeptidase from Flavobacterium meningosepticum, and was decoded from the appropriate genomic DNA. Recombinant prolylendopeptidase is useful for prodn. of biologically active peptides whose C termini are alpha-amidated and have proline residues at or near their C-termini. Examples include LHRH, oxytocin, vasopressin, calcitonin, aspartocin, alpha-MSH, and morphine modulating neuropeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The sequence represents a prolyl-endopeptidase from Flavobacterium meningosepticum, and is encoded by a gene isolated (using probes and 3, A-3, A-13, A-18 and A-13, based on the native enzyme engineer) in plasmid pFPEPO2 (FERN BP-3466). The enzyme may be modified for improved thermostability by molecular evolution enzyme engineering by random chemical mutagenesis and modified polymerase chain reaction). Mutants E408 (FEP-227, from plasmid pur-FPEP-227), E400/A129T/G633V (FEP-361, from plasmid pur-FPEP-321), E400/A129T/G633V (FEP-361, from plasmid pur-FPEP-361), E400/A129T/G633V (FEP-361, from plasmid pur-FPEP-15) and E477K (FEP-361, from plasmid pur-FPEP-15) and E477K (FEP-161) and E477K (FEP-161) are catalyzes selective hydrolytic cleavage of peptides at the C-terminal side of a proline residue, or coupling of peptides by condensation or transpeptidation, and may also be used in contents and midation of biologically active peptides. The mutants show improved efficiency, yield, conversion and resistance to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mutant heat-stable prolyl:endo:peptidase enzymes - from F.meningosepticum, prepd. by mutagenesis of encoding DNA, useful for C-terminal amidation of biologically active peptide(s) e.g. insulin
                                             Prolyl-endopeptidase.

A novel human brain sodium-dependent inorganic phosphate cotransporter (W65148), designated hBNPI, is selectively expressed in discrete populations of neurons and gliam. Its amino acid sequence was deduced from a cDNA clone (T42664) isolated from a human hippocampus cDNA library. hBNPI can be expressed in transformed host cells and used to determine the effectiveness of test cpds. for the treatment or prevention of disorders associated with an inappropriate stimulation of hBNPI.

Claim 1; Page 9-12; 16pp; English.
The alpha-glucosidase gene was isolated from the chromosomal DNA of
Bacillus stearothermophilus ATCC 12016. The gene allows production
                                                                                                                                                                                                                             30-JAN-1997 (first entry)
Human brain sodium-dependent inorganic phosphate cotransporter.
Brain sodium-dependent inorganic phosphate cotransporter; hBNPI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alpha-glucosidase protein and DNA encoding it - obtd. from Bacillus stearothermophilus ATCC 12016, used for starch prodn.

Claim 5; Page 49-52; 64pp; English.
Rat interleukin-1 type-3 receptor (IL-1-3R) (R91065) is a protein
the binds IL-1 (alpha or beta) and, when expressed on a cell surface,
transduces the signal provided by IL-1 to the cell. It can be
obtd. by expression in prokaryotic or eukaryotic host cells of an
encoding cDNA sequence (713167) isolated from a rat lung cDNA library.
IL-1-3R or its soluble form (extracellular domain only) is used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                      Hybrid molecules for targetting chemical entity to cell - have membrane trans-locating and cell binding-regions and used to treat HYV infection, genetic enzyme-deficiency disorders etc.

Treat HYV infection, genetic enzyme-deficiency disorders etc.

Disclosure; Fig 8(1-3); 59pp; English.

Hybrid molecules are produced by covalently linking

(1) a portion (8) of the binding domain of a cell-binding ligand,

(2) a portion (B) of a translocation domain of a protein able to

translocate (C) across the cell cytoplamic membrane, and

and (3) a portion (C) which is to be introduced into the cell.

(A) is derived from a steroid or polypeptide hormone, a single-chain analogue of a monoclonal antibody able to bind an antigen expressed on the cell surface, or a polypeptide toxin.

(B) is derived from a toxin (e.g. diphtheria toxin or Pseudomonas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; enkephalinase; neutral endopeptidase; kidney; intestine; kinin; kidney brush border neutral proteinase; pituitary; brain; lymph nodes; neutrophils; enkephalins; tachykinins.
                                                                                                                                                                                                                                                                                                                                                                     (A) may be derived from insulin, interleukins 2, 3 or 6 or epidermal growth factor.

Suitable enzymes in (C) include cholera toxin, ricin, tetanus toxin, hexosaminidase A, protease, nuclease, SLT-A, etc.

Specified examples are CT-A/DT-B//IL-2, SITA/DT-B//IL-2, ricin A/DT-B//IL-2, and the phenylalanine hydroxylase-DT-B/ or their biologically active mutants.

(CT-A= cholera toxin, DT-B' = truncated diphtheria toxin, SLTA = Shiga-like toxin A; HIVP-BP= HIV protease binding protein. See also 012710-12.

The Decyrthbouncleic acid isolates coding for enkephalinase - and prodn. of enkephalinase, used in therapeutic applications in diagnostic immunoassay and as immunosuppressants.

The Decyrthbouncleic Brighlish.

The DRA was sequenced from poly(A+) human placental RNA. At posn. Introduced from a lambdang found to be an A (Thr). Since the former is identical to the rat amino acid at posn. 465, the latter compared from a rerror of the reverse transcriptesse synthesis of the mRNA. The DNA can be ligated into an expression vector for produced is useful in the treatment of various pathological discorders associated with endogenous peptides such as tachykinins and kinins, eg. acute inflammation, and hyperimmune responses. It is also useful in diagnostic immunoassays, and as immunoappressants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                 This sequence represents human enkephalinase. Enkephalinase is a neutral endopeptidase or kidney brush border neutral proteinase. It has been isolated from the kidney, intestine, pituitary, brain and lymph nodes, and has been detected in many peripheral organs and in human neutrophils. The distribution of enkephalinase in the brain enkephalinase may be used in the treatment of various pathological disorders associated with various endogenous peptides, eg. tachykunins and kinins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polypeptide, with diuretic action - is obtd. from atrium cardis of mammals showing specific bond to atrial natriuretic polypeptide and gene codinh it.

Disclosure; p; Japanese.

Peptide specifically binds to atrial natriuretic polypeptide (ANP) and has diuretic (partic. natriuretic) and hypotensive action.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-NoV-1990 (first entry)
Arrian natriuretic polypeptide binding polypeptide.

Diuretic, atrium cardis; atrial natriuretic peptide binding; hypotensive action.
                                                                                                         1.00v-1989 (first entry)
1.00v-1989 (first entry)
Deduced human common acute lymphoblastic leukaemia antigen
analgesic; inhibits leukaemia; endopeptidase.
WO8905353-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 51; DB 1; Length 750;

Mean 25.084; Variance 41.640; scale 0.602 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
